

The three are: The first is Adabiel. The second is Adahiel. The third is Adahoel. "As Adadoel was the creator of this most blessed hierarchy among the angels, so shall Adabiel be preserved as a radiant example of virginity until the end of all time and the restoration of the 'pre-Adamic' cosmos. The angels would appear to be unintelligent, but are otherwise very spiritual. They are the descendants of Michael, the archangel, and are considered by Christian theology to be the sole angels of the hierarchy of perfect beings. Michael, Gabriel, and Raphael had reason to envy the position of the Cherubim." That's the whole first paragraph. Another bit is: "Your mission should be one with which I will be so much delighted that, if there are no more obstacles to your writing, you should have no other hindrance than my concern and love for you." I think it could be a trick question, but, for what it's worth, it looks like the answer is Adabiel. A: Yes, the closest match is Adabielseth, a large angel mentioned in the holy Bible. In fact the word "Adabielseth" occurs in the Bible in Genesis 3:24, and the phrase "Adabielseth the father of Zabael" occurs in Genesis 49:10. Smart Grid has always been seen as the next big thing and one of the most important developments of this century. It is believed to not only help in the fight against energy crisis but also to make our lives a lot easier by reducing energy wastage and saving a lot of time and money. But a new report has raised concerns over the massive cost of the smart grid which would also mean loss of jobs for the people who work in the power production and power transmission industry. The report says that the smart grid would mean cutting down the number of power plants in operation by up to 50% and also means that power lines would have to be moved away from where the electricity is being generated and carried further. This would require enormous amount of investment and time and will thus put a lot of pressure on the economy. The idea of building smart grids is not new and it is even highlighted by Ericsson. The company announced that it will be launching a pilot project to implement the smart grid system in different cities. In the latest report published by
